

The following charts provide information on the GHG projections in European Union for 2021 (left) and 2019 (right) . The information in provided by member states until 2050.

Usage of presented filters provide more detailed information

Year

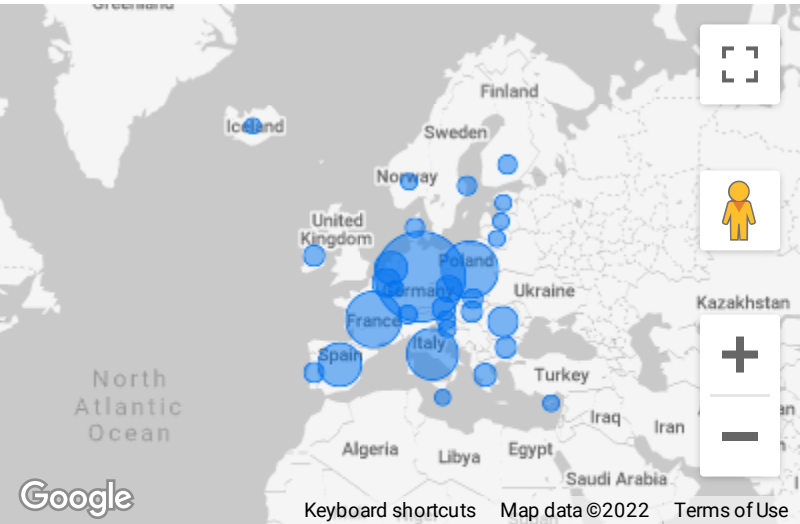

CountryCode

The following line graphs provide information on the projections from 2019 and 2021

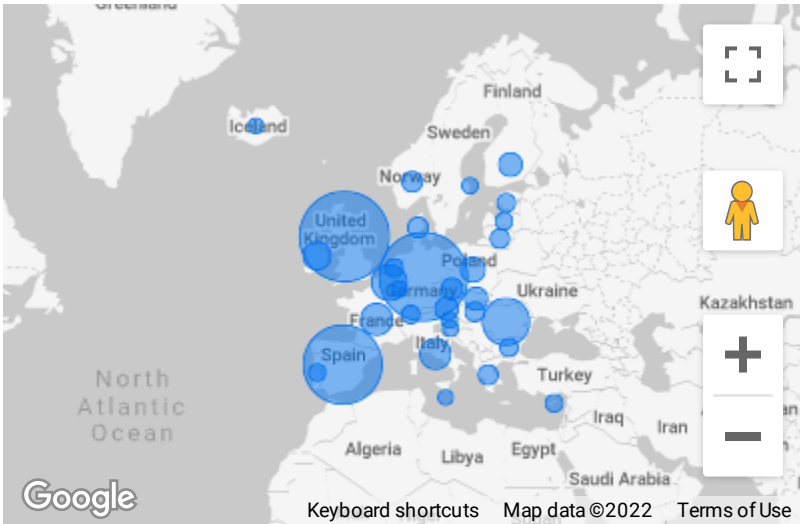

Not every country provides a prediction of its GHG emissions for every year. That it why, a graph may have peaks. Moreover, some countries provide a prediction only every 5 years.

The size of the bubble corresponds to the cumulative GHG emission

2021 Projections

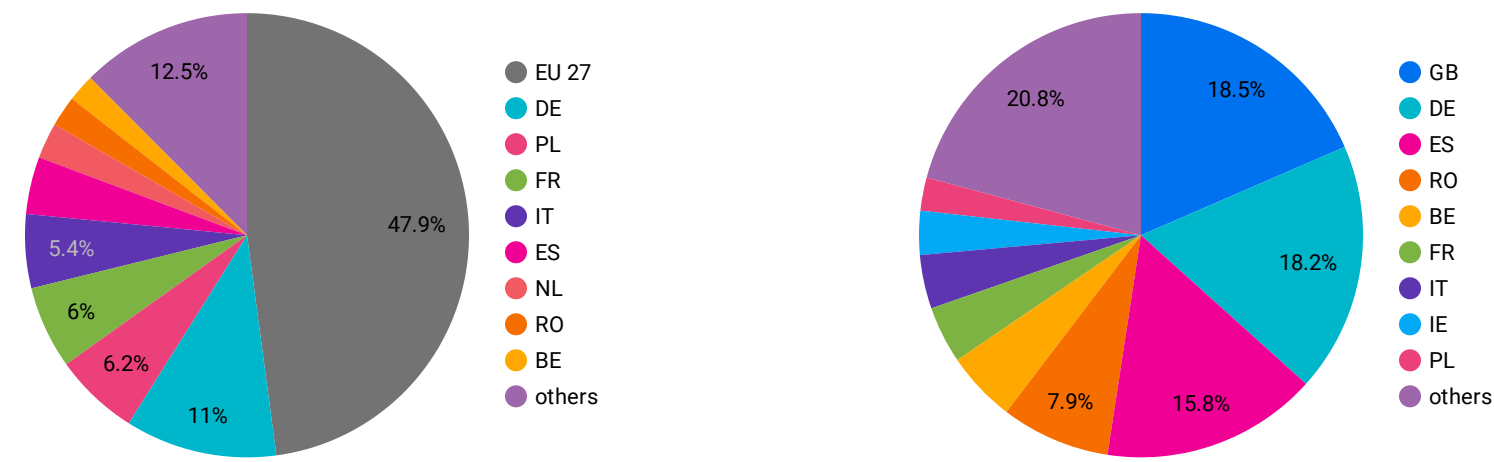

2019 Projections

These charts provide information on the amount of GHG and its share from the total amount.

Year

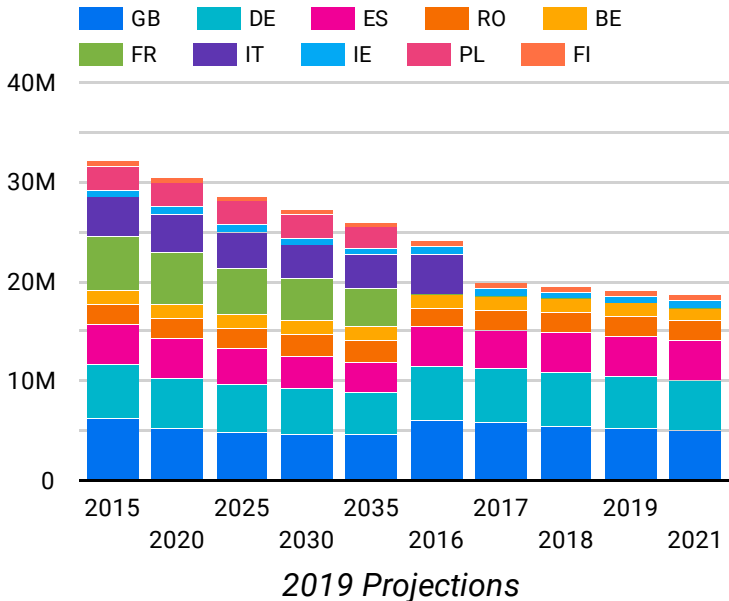

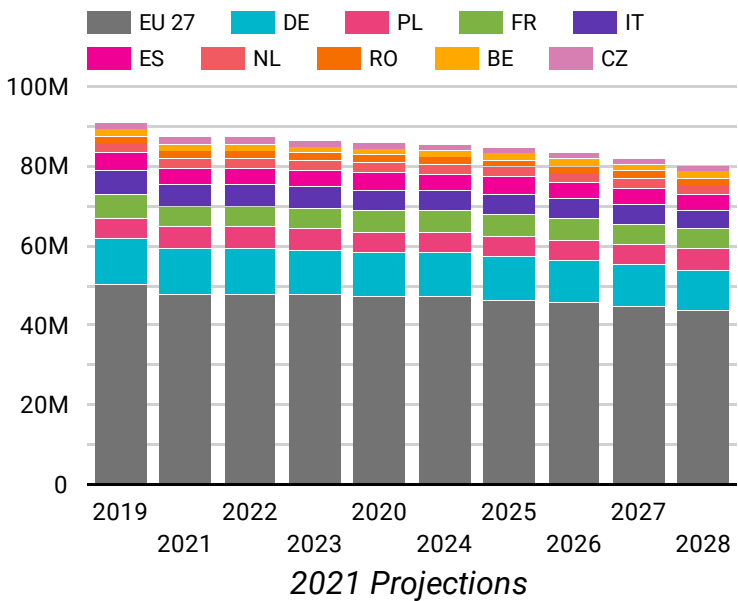

CountryCode

The following pie charts presents the countries percentage from total GHG

In 2019 UK indicated in report as a member of EU. In 2021 UK is not in a reported list.

The following bar charts presents the absolute number of GHG emissions for the given years

After the ~2035 the GHG reported values drop significantly. This explained by the fact, that countries don't provide necessary information.
